

**HV3700 Default Use**

**To whom it may concern,**

**SYL now confirms safety use of battery as below,**

In Default mode, there is a choice for 50Ah. HV3700 series can communicate with PV master without any barrier. When it come to fully charged or discharged, there is message sent to Inverter then current value is constrained effectively.

Therefore, our battery can be protected by inverter side and there will be no communication issue.
